DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-5, 8-10 and 12-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Quinlan et al. "*Quinlan*" (USPN 3785002).

Quinlan teaches a wiper coupling comprising a wiper arm (14) and a windscreen wiper (12) having a flexible elongate beam (24), which is curved. There is an elongate, planar base, which is known as the support structure (32). The upper surface of the beam is spaced at a predetermined distance from the support structure by a pair spacing formations (31). The spacing formations are engageable in use with an upper surface of the beam at a contact point (where the bottom of the rivet (31) touches the upper surface of the beam (24) in figure 6). In this instant case, the predetermined distance between the beam and the support structure is shown in figure 1 and 6. The spacing formation comprises a fulcrum formation, which permits bending of the beam. The spacing formations form an elongate protrusion located transversely to the base. There are mounting means (28) for mounting the support structure to the beam. There is a connecting structure (22) for pivotal connection to the wiper arm. The beam has a securing formation (25) for securing the support structure to the beam in a manner to inhibit longitudinal movement of the beam.

Art Unit: 1744

Allowable Subject Matter

3. Claims 6, 7 and 11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter:

Claim 6 and 11 include the limitation that there are two spaced apart claws which extend from the base to secure the support structure to the beam. Quinlan et al. fails to teach claws as the mounting means nor would it have been obvious to combine references to achieve the claimed invention.
